What's on the ?

Grade 6 Math Skills You'll Master

Grade 6 Math Standards

1. Ratios & Proportions

Unit rates, percentages, proportional relationships

2. The Number System

Fractions, decimals, integers, GCF, LCM, absolute value

3. Expressions & Equations

Exponents, algebraic expressions, solving equations

4. Geometry

Area, volume, surface area, coordinate plane

5. Statistics & Probability

Mean, median, data displays, variability

6. Problem Solving

Multi-step problems, real-world applications

1. Ratios & Proportions

Key Skills:

- Understanding ratio concepts and using ratio language
- Computing unit rates and unit pricing
- Using tables and graphs for proportional relationships
- Solving problems involving percentages
- Applying ratio reasoning to real-world situations

Example: If 3 notebooks cost \$12, how much do 5 notebooks cost?

Solution: Unit rate $= \$12 \div 3 = \$4$ per notebook. So $5 \times \$4 = \mathbf{\$20}$

Ratio 3:2

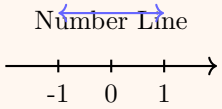

2. The Number System

Key Skills:

- Dividing fractions by fractions
- Computing with multi-digit decimals
- Finding GCF and LCM
- Understanding positive and negative integers
- Interpreting absolute value
- Solving problems with rational numbers

Example: $\frac{2}{3} \div \frac{1}{4} = \frac{2}{3} \times \frac{4}{1} = \frac{8}{3} = 2\frac{2}{3}$

$|-1| = |1| = 1$

3. Expressions & Equations

Key Skills:

- Writing expressions with exponents
- Evaluating algebraic expressions
- Generating equivalent expressions
- Understanding solving equations
- Writing equations for real-world situations

$$3x + 5 = 14$$
$$\downarrow$$
$$3x = 9$$
$$\downarrow$$
$$x = 3$$

Solving step by step

Example: If $2x + 7 = 15$, then $2x = 8$, so $x = 4$

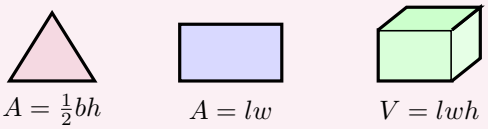

effortlessMath.com

4. Geometry

Key Skills:

- Finding area of triangles and quadrilaterals
- Finding volume of rectangular prisms
- Using nets to find surface area
- Drawing shapes in the coordinate plane

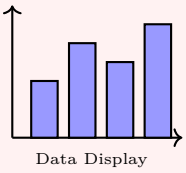

Key Formulas:

5. Statistics & Data

Key Skills:

- Recognizing statistical questions
- Finding mean, median, and mode
- Understanding data distribution
- Creating and interpreting data displays
- Describing data variability

Example: For data set $\{2, 5, 5, 8, 10\}$:
Mean $= \frac{2+5+5+8+10}{5} = 6$, Median $= 5$

6. Problem Solving

Key Skills:

- Solving multi-step word problems
- Applying math concepts to real-world situations
- Using multiple strategies to solve problems
- Checking answers for reasonableness

Example: A store sells pencils in packs of 8 for \$2.40. Marcus needs 50 pencils. How many packs should he buy, and what will it cost?

Solution: $50 \div 8 = 6.25$, so Marcus needs 7 packs. Cost $= 7 \times \$2.40 = \mathbf{\$16.80}$

Suggested 6-Week Schedule

①	②	③	④	⑤	⑥
Week 1	**Week 2**	**Week 3**	**Week 4**	**Week 5**	**Week 6**
Test 1 +	Test 2 +	Test 3 +	Test 4 +	Test 5 +	Test 6 +
Review	Review	Review	Review	Review	Final Review

Each Week:

- **Day 1:** Take the practice test (no strict time limit for beginners)
- **Day 2:** Check answers and identify areas for review
- **Days 3–4:** Review explanations for missed problems
- **Day 5:** Light practice or revisit challenging topics
- **Weekend:** Rest and celebrate progress!

Encouraging Words to Use

When they struggle:

- "This is challenging, but you can do it."
- "Let's work through this together."
- "What part is confusing?"
- "Mistakes help you learn."

When they succeed:

- "I can see you worked hard on that!"
- "You didn't give up—great persistence!"
- "Look how much you've improved!"
- "That strategy really worked well."

Building Confidence Matters

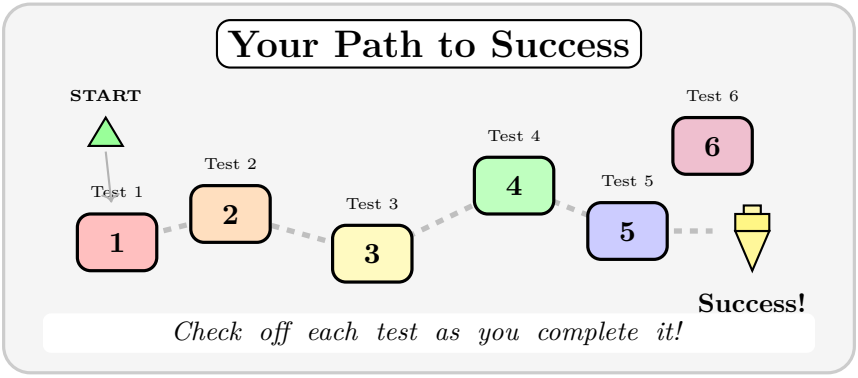

The goal isn't just improving test scores—it's helping your child develop **confidence** and a **positive attitude** toward mathematics. When students believe they can succeed, they work harder and learn more.

Your encouragement and support make a real difference!

Thank you for being part of your student's success!
