Mindset for Success

Preparing Your Mind for the Challenge

Your attitude determines your direction.

- **Believe in Yourself:** You have prepared for this. Trust your training and your ability to figure things out.
- **Stay Positive:** If you encounter a difficult question, don't panic. Take a deep breath, mark it, and move on. You can come back to it with a clearer mind.
- **Rest and Recover:** Your brain needs sleep to function at its best. Get a good night's sleep before the test and eat a healthy breakfast.
- **Visualize Success:** Imagine yourself sitting at the desk, calm and focused, answering questions correctly. Visualization can help reduce anxiety.

"Success is the sum of small efforts, repeated day in and day out." – Robert Collier

Math Review Cheat Sheets

RATIOS & PROPORTIONS

▶ What is a Ratio?

A ratio compares two quantities. Write it three ways:

5 to 3 | 5 : 3 | $\frac{5}{3}$

▶ Unit Rate = "Per ONE"

Divide to find the amount for 1 unit.

Example: \$24 for 6 gallons

$\$24 \div 6 = \$4$ **per gallon**

▶ Solving Proportions

Cross Multiply!

$$\frac{2}{5} = \frac{x}{15}$$

$$5 \times x = 2 \times 15$$

$$5x = 30$$

$$x = \mathbf{6}$$

WATCH OUT: Keep units in the same order! If top is miles, bottom must be miles on both sides.

PERCENTS

▶ Percent = "Out of 100"

Converting

% → Decimal
Divide by 100 (move left 2)

Decimal → %
Multiply by 100 (move right 2)

Quick Conversions

%	Dec	Frac
50%	0.5	$\frac{1}{2}$
25%	0.25	$\frac{1}{4}$
10%	0.1	$\frac{1}{10}$

▶ Three Types of Percent Problems

Find the Part
What is 20% of 80?
$0.20 \times 80 = 16$

Find the Percent
16 is what % of 80?
$16 \div 80 = 0.2 = 20\%$

Find the Whole
16 is 20% of what?
$16 \div 0.20 = 80$

PRO TIP: "Of" means multiply. "Is" means equals. Translate word problems!

Watch decimals
Be precise

FRACTION OPERATIONS

▶ Dividing Fractions: Keep · Change · Flip

$$\frac{3}{4} \div \frac{2}{5} \longrightarrow \underbrace{\frac{3}{4}}_{\text{KEEP}} \underbrace{\times}_{\text{CHANGE}} \underbrace{\frac{5}{2}}_{\text{FLIP}} \longrightarrow = \frac{15}{8} = 1\frac{7}{8}$$

▶ Multiplying Fractions

Multiply straight across—top × top, bottom × bottom.

$$\frac{2}{3} \times \frac{4}{5} = \frac{2\times4}{3\times5} = \frac{8}{15}$$

Simplify before or after multiplying!

▶ Adding/Subtracting Fractions

Must have the **same denominator** first!

$$\frac{1}{3} + \frac{1}{4} = \frac{4}{12} + \frac{3}{12} = \frac{7}{12}$$

Find the LCD (Least Common Denominator)!

WATCH OUT: When adding fractions, find the LCD first. Then add only the numerators, keep the same denominator!

FORMULA QUICK REFERENCE

Percent $\frac{\text{part}}{\text{whole}} \times 100$	**Mean** $\frac{\text{sum}}{\text{count}}$	**Unit Rate** $\frac{\text{amount}}{\text{units}}$
Triangle $A = \frac{1}{2}bh$	**Rectangle** $A = bh$	**Volume** $V = lwh$

You're Prepared!

Review these formula sheets before each practice test. The more you practice, the more confident you'll become. Trust your preparation and show what you know!

Good luck on the test!

Questions: 40 **Duration:** No time limit

Calculator Policy: Scientific calculators are allowed

Important Test Information

Question Types:

- **Multiple Choice:** Choose the best answer from the four options (A, B, C, or D).
- **Open-Ended:** Write your complete answer in the space provided.

Test-Taking Tips:

- Read each question carefully before answering.
- Check your answers before moving on.
- Use the formula sheet as needed.

Remember: Take your time, stay calm, and do your best. You've prepared well for this test!
