Welcome, 8th Grader!

The Bridge Between Middle School and High School Starts Here

Dear Eighth Grader,

Welcome! This is *your* year. Everything you have built so far — working with fractions, decimals, ratios, and basic geometry — has been preparing you for this moment. Eighth-grade math is where all of those skills come together and open the door to high school and beyond.

8.DPS.D.4	Construct and interpret a two-way table summarizing bivariate categorical data collected from the same subjects

8.GM | Geometry and Measurement

Apply geometric reasoning and measurement to solve problems

8.GM.AV	Solve problems involving area and volume of geometric figures
8.GM.AV.1	Apply given formulas to solve problems involving the volume of cones, cylinders, and spheres, including authentic problems
8.GM.GF	Analyze properties of two- and three-dimensional geometric figures
8.GM.GF.1	Perform single transformations to a figure on the coordinate plane and determine whether the figures are congruent or similar
8.GM.GF.2	Describe the characteristics of transformations on the coordinate plane using transformation language
8.GM.GF.3	Name the type of transformation needed to map a pre-image to its image
8.GM.GF.4	Describe the following angle-pair relationships: interior and exterior angles of triangles and angles formed when a transversal cuts parallel lines or intersecting lines. Solve for an unknown angle in a figure by applying facts about these angles
8.GM.GF.5	Describe the relationship between the leg lengths and the hypotenuse length of a right triangle. Determine whether a triangle is a right triangle using this relationship
8.GM.GF.6	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in two and three dimensions on and off a coordinate plane, including authentic problems

8.NO | Number and Operations

Understand and apply properties of rational and irrational numbers

8.NO.NS	Understand and apply concepts of rational and irrational numbers
8.NO.NS.1	Compare and classify real numbers within the real number system

8.NO.NS.2	Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them on a number line diagram, and estimate the value of irrational expressions involving one operation
8.NO.NS.3	Use scientific notation to represent very large or very small quantities. Interpret scientific notation generated by technology. Compare and order numbers in both scientific and standard notation
8.NO.O	Apply operations with rational numbers and integer exponents
8.NO.O.1	Evaluate mentally the square roots of perfect squares up to 225 and cube roots of perfect cubes up to 1000
8.NO.O.2	Add, subtract, multiply, and divide rational numbers using strategies or procedures

15. A walking trail runs along two straight segments. The first segment is $\sqrt{20}$ km and the second is π km. (a) Estimate $\sqrt{20}$ to the nearest tenth. (b) Using $\pi \approx 3.14$, estimate the total trail length. (c) If a hiker walks at 5 km/h, about how many minutes will the entire trail take? _____

16. A rectangular picture frame has dimensions $\sqrt{18}$ inches by $(2+\sqrt{5})$ inches. (a) Estimate each dimension to the nearest tenth. (b) Estimate the perimeter of the frame. (c) If framing material costs \$1.50 per inch, estimate the total cost. _____

17. The area of a circular garden is 50 m^2. (a) Using $A = \pi r^2$, solve for r in exact form. (b) Estimate r to the nearest tenth. (c) Estimate the circumference $C = 2\pi r$ to the nearest tenth of a metre. _____

15) 36 pieces
16) Yes—the repeating decimal *is* the fraction $\frac{8}{11}$
17) $0.\overline{6} = \frac{2}{3}$; total $= \frac{2}{3} \times 5 = \frac{10}{3} = 3\frac{1}{3}$ cups
18) Both fractions are equal, but Eddie's is fully simplified: $\frac{5}{11}$
