Week 1

Ratios, Rates, and Proportions

Comparing two quantities and finding the rate that ties them together.

Bridge goal: Lock in the ratio and unit-rate habits that Grade 7 proportional reasoning is built on.

Day 1

D1 D2 D3 D4 D5

★ Fun Review 6.N.3.1, 6.A.3.1

Understanding Ratios

A ratio compares two amounts. Write them in the order the problem names, every time.

★ **Learn it** A **ratio** compares two quantities. You can compare one part with another part (*part-to-part*) or one part with the whole group (*part-to-whole*). The same ratio can be written three ways: with the word "to," with a colon, or as a fraction. Order matters — write the quantities in the order the problem names them. A ratio is in **simplest form** when both numbers share no common factor larger than 1.

Example. A bag has 6 red and 9 blue marbles. Write red to blue in simplest form.

⇒ Red to blue is 6 : 9. Both divide by 3, so the simplest form is 2 : 3.

1. A pizza has 3 cheese slices and 5 veggie slices. Write the ratio of cheese to veggie slices.

☐ **A.** 5 : 3

☐ **B.** 3 : 8

☐ **C.** 3 : 5

☐ **D.** 8 : 3

2. The diagram shows circles representing balloons. What is the ratio of striped balloons to solid balloons?

Striped

Solid

☐ A. 3 : 4

☐ B. 4 : 3

☐ C. 6 : 8

☐ D. 8 : 6

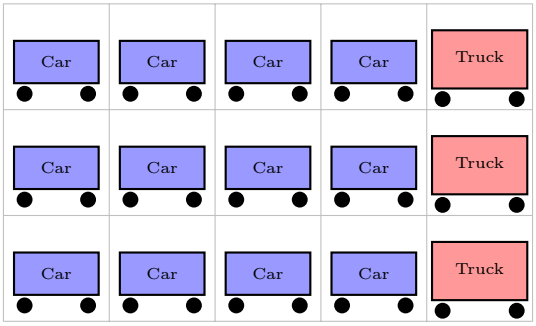

3. There are 6 red marbles and 9 blue marbles in a bag. Write the ratio of red marbles to blue marbles in simplest form.

Write your answer in this box.

4. A parking lot has 14 cars and 6 trucks. Write the ratio of trucks to *all* vehicles in simplest form.

☐ **A.** 6 : 14
☐ **B.** 3 : 10
☐ **C.** 7 : 10
☐ **D.** 10 : 3

5. The parking lot diagram shows cars and trucks. What is the ratio of cars to trucks?

Parking Lot

☐ A. 3 : 1
☐ B. 4 : 1
☐ C. 5 : 1
☐ D. 1 : 4

6. Write the ratio 9 : 12 in simplest form.

☐ **A.** 3 : 4
☐ **B.** 4 : 3
☐ **C.** 9 : 12
☐ **D.** 1 : 3

7. A bracelet has 4 red beads and 6 white beads. What is the ratio of red beads to the total number of beads?

☐ A. 4:6
☐ B. 2:3
☐ C. 2:5
☐ D. 5:2

8. The diagram shows circles representing marbles. What is the ratio of white marbles to gray marbles?

★ Challenge! Think a little deeper

13. A recipe calls for 750 milliliters of milk. If milk costs \$3.20 per liter, how much will the milk for this recipe cost?

Write your answer in this box.

14. Six apples cost \$3.00. What is the cost per apple?

☐ **A.** \$2.00
☐ **C.** \$0.50
☐ **B.** \$1.50
☐ **D.** \$18.00

Deep thinking: Show your strategy, then write and solve one harder version.

Day 4

D1 D2 D3 D4 D5

★ Fun Review GM.2.3, 6.N.3.2

Comparing Rates

Shrink each rate down to its unit rate, then the better or faster one is easy to spot.

★ **Learn it** To compare two rates fairly, turn each one into a **unit rate** first — the "per one" amount — then compare. For speed, the *higher* unit rate is faster. For price, the *lower* unit rate is the better buy. Decide which direction counts as "better" before you choose.

Example. Which is cheaper: 3 cans for \$2.40 or 5 cans for \$4.00?

$\Rightarrow$ \$2.40 $\div$ 3 = \$0.80 per can; \$4.00 $\div$ 5 = \$0.80 per can. They cost the same per can.

1. Athlete A swims 300 meters in 6 minutes. Athlete B swims 250 meters in 5 minutes. Who swims faster?

☐ A. Athlete A is faster.

☐ B. Athlete B is faster.

☐ C. Both swimmers have the same speed.

☐ D. Athlete A swam more meters, so is faster.

2. The visual cards show a distance and a time. What is the unit rate in miles per hour?

Distance	Time
48 miles	4 hours

☐ **A.** 12

☐ **B.** 14

☐ **C.** 10

☐ **D.** 52

3. Store X sells 5 pens for \$4.00. Store Y sells 8 pens for \$6.00. Which store is cheaper per pen?

☐ **A.** Store X (\$0.80)

☐ **B.** Same price

☐ **C.** Store X (\$0.75)

☐ **D.** Store Y (\$0.75)

4. Train A travels 360 miles in 8 hours. Train B travels 330 miles in 6 hours. Which train travels faster?

☐ A. Train A is faster.

☐ B. Train B is faster.

☐ C. Both trains travel at the same speed.

☐ D. Train A because it travels more miles total.

5. The visual cards show a distance and a time. What is the unit rate in miles per hour?

Distance	Time
30 miles	5 hours

☐ **A.** 35

☐ **B.** 4

☐ **C.** 6

☐ **D.** 8

Scan Me

6. Brand X sells a 12-ounce bottle of shampoo for $9. Brand Y sells a 16-ounce bottle for $11. Which brand costs less per ounce?

☐ A. Brand X is cheaper per ounce.

☐ B. Brand Y is cheaper per ounce.

☐ C. Both brands cost the same per ounce.

☐ D. Brand Y because the bottle is larger.

7. Bakery P bakes 18 cookies in 3 hours. Bakery Q bakes 28 cookies in 4 hours. Which bakery bakes faster?

☐ A. Bakery P bakes faster.

☐ B. Bakery Q bakes faster.

☐ C. Both bakeries bake at the same speed.

☐ D. Bakery Q because 28 is more than 18.

8. The visual cards show a distance and a time. What is the unit rate in miles per hour?

Distance	Time
18 miles	2 hours

☐ **A.** 9

☐ **B.** 11

☐ **C.** 7

☐ **D.** 20

9. Printer P prints 60 pages in 5 minutes. Printer Q prints 90 pages in 8 minutes. Which printer is faster?

☐ A. Printer P

☐ B. Printer Q

☐ C. Both printers print at the same speed.

☐ D. Printer Q printed more pages, so it is faster.

10. Two juice companies are having a sale. Company X sells 24 ounces of juice for $6. Company Y sells 20 ounces of juice for $4. What is the unit price (in dollars per ounce) at the cheaper store? Round to the nearest cent.

Write your answer in this box.

11. Runner X runs 5 miles in 40 minutes. Runner Y runs 4 miles in 32 minutes. Who is faster?

☐ A. Runner X

☐ B. Runner Y

☐ C. Both runners are equally fast.

☐ D. Runner X ran fewer miles, so Runner Y is faster.

12. The visual cards show a distance and a time. What is the unit rate in miles per hour?

Distance	Time
60 miles	4 hours

☐ **A.** 15

☐ **B.** 64

☐ **C.** 13

☐ **D.** 17
