Welcome to
AFOQT Math Prep
2021

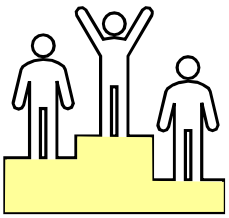

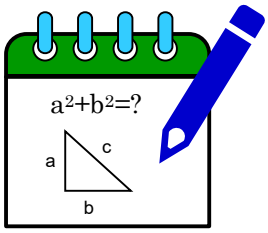

Thank you for choosing Effortless Math for your AFOQT Math test preparation and congratulations on making the decision to take the AFOQT test! It's a remarkable move you are taking, one that shouldn't be diminished in any capacity. That's why you need to use every tool possible to ensure you succeed on the test with the highest possible score, and this extensive study guide is one such tool.

If math has never been a strong subject for you, **don't worry**! This book will help you prepare for (and even ACE) the AFOQT test's math section. As test day draws nearer, effective preparation becomes increasingly more important. Thankfully, you have this comprehensive study guide to help you get ready for the test. With this guide, you can feel confident that you will be more than ready for the AFOQT Math test when the time comes.

First and foremost, it is important to note that this book is a study guide and not a textbook. It is best read from cover to cover. Every lesson of this "self-guided math book" was carefully developed to ensure that you are making the most effective use of your time while preparing for the test. This up-to-date guide reflects the 2021 test guidelines and will put you on the right track to hone your math skills, overcome exam anxiety, and boost your confidence, so that you can have your best to succeed on the AFOQT Math test.

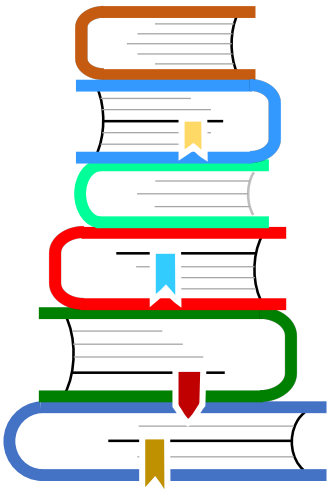

This study guide will:

- ☑ Explain the format of the AFOQT Math test.
- ☑ Describe specific test-taking strategies that you can use on the test.
- ☑ Provide AFOQT Math test-taking tips.
- ☑ Review all AFOQT Math concepts and topics you will be tested on.
- ☑ Help you identify the areas in which you need to concentrate your study time.
- ☑ Offer exercises that help you develop the basic math skills you will learn in each section.
- ☑ Give **2 realistic and full-length practice tests** (featuring new question types) with detailed answers to help you measure your exam readiness and build confidence.

This resource contains everything you will ever need to succeed on the AFOQT Math test. You'll get in-depth instructions on every math topic as well as tips and techniques on how to answer each question type. You'll also get plenty of practice questions to boost your test-taking confidence.

In addition, in the following pages you'll find:

- **How to Use This Book Effectively** – This section provides you with step-by-step instructions on how to get the most out of this comprehensive study guide.
- **How to study for the AFOQT Math Test** – A six-step study program has been developed to help you make the best use of this book and prepare for your AFOQT Math test. Here you'll find tips and strategies to guide your study program and help you understand AFOQT Math and how to ace the test.

- **AFOQT Math Review** – Learn everything you need to know about the AFOQT Math test.
- **AFOQT Math Test-Taking Strategies** – Learn how to effectively put these recommended test-taking techniques into use for improving your AFOQT Math score.
- **Test Day Tips** – Review these tips to make sure you will do your best when the big day comes.

Effortless Math's AFOQT Online Center

Effortless Math Online AFOQT Center offers a complete study program, including the following:

- ✓ Step-by-step instructions on how to prepare for the AFOQT Math test
- ✓ Numerous AFOQT Math worksheets to help you measure your math skills
- ✓ Complete list of AFOQT Math formulas
- ✓ Video lessons for all AFOQT Math topics
- ✓ Full-length AFOQT Math practice tests
- ✓ And much more…

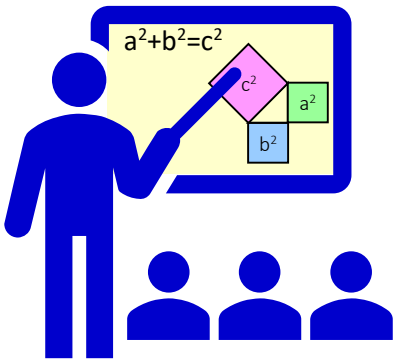

No Registration Required.

Visit **EffortlessMath.com/AFOQT** to find your online AFOQT Math resources.

How to Use This Book Effectively

Look no further when you need a study guide to improve your math skills to succeed on the math portion of the AFOQT test. Each chapter of this comprehensive guide to the AFOQT Math will provide you with the knowledge, tools, and understanding needed for every topic covered on the test.

It's imperative that you understand each topic before moving onto another one, as that's the way to guarantee your success. Each chapter provides you with examples and a step-by-step guide of every concept to better understand the content that will be on the test. To get the best possible results from this book:

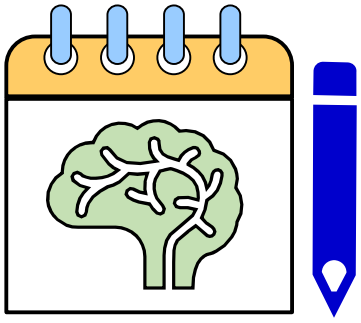

- **Begin studying long before your test date**. This provides you ample time to learn the different math concepts. The earlier you begin studying for the test, the sharper your skills will be. Do not procrastinate! Provide yourself with plenty of time to learn the concepts and feel comfortable that you understand them when your test date arrives.
- **Practice consistently**. Study AFOQT Math concepts at least 20 to 30 minutes a day. Remember, slow and steady wins the race, which can be applied to preparing for the AFOQT Math test. Instead of cramming to tackle everything at once, be patient and learn the math topics in short bursts.
- Whenever you get a math problem wrong, **mark it off, and review it later** to make sure you understand the concept.
- Start each session by **looking over the previous material.**
- Once you've reviewed the book's lessons, **take a practice test at the back of the book** to gauge your level of readiness. Then, review your results. Read detailed answers and solutions for each question you missed.
- **Take another practice test** to get an idea of how ready you are to take the actual exam. Taking the practice tests will give you the confidence you need on test day. Simulate the AFOQT testing environment by sitting in a quiet room free from distraction. Make sure to clock yourself with a timer.

How to Study for the AFOQT Math Test

Studying for the AFOQT Math test can be a really daunting and boring task. What's the best way to go about it? Is there a certain study method that works better than others? Well, studying for the AFOQT Math can be done effectively. The following six-step program has been designed to make preparing for the AFOQT Math test more efficient and less overwhelming.

Step 1 - Create a study plan
Step 2 - Choose your study resources
Step 3 - Review, Learn, Practice
Step 4 - Learn and practice test-taking strategies
Step 5 - Learn the AFOQT Test format and take practice tests
Step 6 - Analyze your performance

Step 1: Create a Study Plan

It's always easier to get things done when you have a plan. Creating a study plan for the AFOQT Math test can help you to stay on track with your studies. It's important to sit down and prepare a study plan with what works with your life, work, and any other obligations you may have. Devote enough time each day to studying. It's also a great idea to break down each section of the exam into blocks and study one concept at a time.

It's important to understand that there is no "right" way to create a study plan. Your study plan will be personalized based on your specific needs and learning style.

Follow these guidelines to create an effective study plan for your AFOQT Math test:

- ★ **Analyze your learning style and study habits** – Everyone has a different learning style. It is essential to embrace your individuality and the unique way you learn. Think about what works and what doesn't work

Multiplying Mixed Numbers

Use the following steps for multiplying mixed numbers:

- ☆ Convert the mixed numbers into fractions. $a\frac{c}{b} = a + \frac{c}{b} = \frac{ab+c}{b}$
- ☆ Multiply fractions. $\frac{a}{b} \times \frac{c}{d} = \frac{a \times c}{b \times d}$
- ☆ Write your answer in lowest terms.
- ☆ If the answer is an improper fraction (numerator is bigger than denominator), convert it into a mixed number.

Examples:

Example 1. Multiply. $3\frac{1}{3} \times 2\frac{3}{5} =$

Solution: Convert mixed numbers into fractions,
$3\frac{1}{3} = \frac{3\times3+1}{3} = \frac{10}{3}$ and $2\frac{3}{5} = \frac{2\times5+3}{5} = \frac{13}{5}$. Apply the fractions rule for multiplication:
$\frac{10}{3} \times \frac{13}{5} = \frac{10 \times 13}{3 \times 5} = \frac{130}{15} = \frac{130 \div 5}{15 \div 5} = \frac{26}{3}$
The answer is an improper fraction. Convert it into a mixed number. $\frac{26}{3} = 8\frac{2}{3}$

Example 2. Multiply. $2\frac{3}{4} \times 4\frac{3}{7} =$

Solution: Converting mixed numbers into fractions, $2\frac{3}{4} \times 4\frac{3}{7} = \frac{11}{4} \times \frac{31}{7}$
Apply the fractions rule for multiplication: $\frac{11}{4} \times \frac{31}{7} = \frac{11\times31}{4\times7} = \frac{341}{28} = 12\frac{5}{28}$

Example 3. Find the product. $4\frac{3}{5} \times 3\frac{4}{6} =$

Solution: Convert mixed numbers to fractions: $4\frac{3}{5} = \frac{23}{5}$ and $3\frac{4}{6} = \frac{22}{6} = \frac{22\div2}{6\div2} = \frac{11}{3}$.

Multiply two fractions:

$\frac{23}{5} \times \frac{11}{3} = \frac{23\times11}{5\times3} = \frac{253}{15} = 16\frac{13}{15}$

Dividing Mixed Numbers

Use the following steps for dividing mixed numbers:

- ☆ Convert the mixed numbers into fractions. $a\frac{c}{b} = a + \frac{c}{b} = \frac{ab+c}{b}$
- ☆ Divide fractions: Keep, Change, Flip: Keep the first fraction, change the division sign to multiplication, and flip the numerator and denominator of the second fraction. Then, solve! $\frac{a}{b} \div \frac{c}{d} = \frac{a}{b} \times \frac{d}{c} = \frac{a \times d}{b \times c}$
- ☆ Write your answer in lowest terms.
- ☆ If the answer is an improper fraction (numerator is bigger than denominator), convert it into a mixed number.

Examples:

Example 1. Solve. $2\frac{2}{3} \div 1\frac{1}{2} =$

Solution: Convert mixed numbers into fractions:
$2\frac{2}{3} = \frac{2\times3+2}{3} = \frac{8}{3}$ and $1\frac{1}{2} = \frac{1\times2+1}{2} = \frac{3}{2}$
Keep, Change, Flip: $\frac{8}{3} \div \frac{3}{2} = \frac{8}{3} \times \frac{2}{3} = \frac{8\times2}{3\times3} = \frac{16}{9}$. The answer is an improper fraction. Convert it into a mixed number: $\frac{16}{9} = 1\frac{7}{9}$

Example 2. Solve. $4\frac{2}{3} \div 1\frac{3}{5} =$

Solution: Convert mixed numbers to fractions, then solve:
$4\frac{2}{3} \div 1\frac{3}{5} = \frac{14}{3} \div \frac{8}{5} = \frac{14}{3} \times \frac{5}{8} = \frac{70}{24} = 2\frac{11}{12}$

Example 3. Solve. $3\frac{2}{5} \div 2\frac{1}{3} =$

Solution: Converting mixed numbers to fractions: $3\frac{2}{5} \div 2\frac{1}{3} = \frac{17}{5} \div \frac{7}{3}$
Keep, Change, Flip: $\frac{17}{5} \div \frac{7}{3} = \frac{17}{5} \times \frac{3}{7} = \frac{17\times3}{5\times7} = \frac{51}{35} = 1\frac{16}{35}$

Day 1: Practices

Simplify each fraction.

1) $\frac{2}{8} =$

2) $\frac{5}{15} =$

3) $\frac{12}{36} =$

4) $\frac{65}{120} =$

Find the sum or difference.

5) $\frac{3}{10} + \frac{2}{10} =$

6) $\frac{4}{5} + \frac{1}{10} =$

7) $\frac{3}{4} + \frac{6}{20} =$

8) $\frac{4}{9} - \frac{1}{9} =$

9) $\frac{3}{8} - \frac{1}{6} =$

10) $\frac{9}{21} - \frac{2}{7} =$

Find the products or quotients.

11) $\frac{3}{4} \div \frac{9}{12} =$

12) $\frac{7}{10} \div \frac{21}{20} =$

13) $\frac{12}{21} \div \frac{3}{7} =$

14) $\frac{12}{5} \times \frac{10}{24} =$

15) $\frac{33}{36} \times \frac{3}{4} =$

16) $\frac{7}{9} \times \frac{1}{3} =$

Find the sum.

17) $3\frac{1}{2} + 1\frac{3}{4} =$

18) $4\frac{1}{8} + 2\frac{7}{8} =$

19) $4\frac{1}{2} + 2\frac{3}{8} =$

20) $1\frac{2}{21} + 4\frac{4}{7} =$

21) $6\frac{3}{5} + 1\frac{2}{3} =$

22) $2\frac{3}{11} + 3\frac{1}{2} =$

Find the difference.

23) $6\frac{2}{3} - 4\frac{1}{3} =$

24) $5\frac{2}{5} - 3\frac{1}{5} =$

25) $8\frac{1}{2} - 3\frac{1}{4} =$

26) $7\frac{2}{3} - 2\frac{1}{6} =$

Find the products.

27) $1\frac{2}{3} \times 2\frac{3}{4} =$

28) $1\frac{1}{6} \times 1\frac{3}{5} =$

29) $4\frac{1}{2} \times 1\frac{2}{3} =$

30) $2\frac{1}{2} \times 4\frac{4}{5} =$

31) $2\frac{1}{5} \times 4\frac{1}{2} =$

32) $1\frac{1}{9} \times 2\frac{3}{5} =$

Solve.

33) $3\frac{1}{3} \div 1\frac{2}{3} =$

34) $4\frac{2}{3} \div 2\frac{1}{2} =$

35) $6\frac{1}{5} \div 2\frac{1}{3} =$

36) $2\frac{2}{3} \div 1\frac{4}{9} =$

37) $4\frac{1}{6} \div 2\frac{1}{8} =$

38) $3\frac{2}{5} \div 1\frac{5}{4} =$

39) A pizza cut into 6 parts. David and his sister Sara ordered two pizzas. David ate $\frac{1}{3}$ of his pizza and Eva ate $\frac{1}{2}$ of her pizza. What part of the two pizzas was left?

40) Jake is preparing to run a marathon. He runs $9\frac{1}{3}$ miles on Saturday and two times that many on Monday and Wednesday. Jake wants to run a total of 50 miles this week. How many more miles does he need to run?

41) Last week 21,000 fans attended a football match. This week four times as many bought tickets, but one third of them cancelled their tickets. How many are attending this week?

42) In a bag of small balls $\frac{1}{2}$ are black, $\frac{1}{4}$ are white, $\frac{1}{8}$ are red and the remaining 16 blue. How many balls are white?

Day 1: Answers

1) $\frac{2}{8}=\frac{2\div2}{8\div2}=\frac{1}{4}$

2) $\frac{5}{15}=\frac{5\div5}{15\div5}=\frac{1}{3}$

3) $\frac{12}{36}=\frac{12\div12}{36\div12}=\frac{1}{3}$

4) $\frac{65}{120}=\frac{65\div5}{120\div5}=\frac{13}{24}$

5) $\frac{3}{10}+\frac{2}{10}=\frac{3+2}{10}=\frac{5}{10}=\frac{5\div5}{10\div5}=\frac{1}{2}$

6) $\frac{4}{5}+\frac{1}{10}=\frac{4\times2}{5\times2}+\frac{1}{10}=\frac{8}{10}+\frac{1}{10}=\frac{8+1}{10}=\frac{9}{10}$

7) $\frac{3}{4}+\frac{6}{20}=\frac{3\times5}{4\times5}+\frac{6}{20}=\frac{15}{20}+\frac{6}{20}=\frac{21}{20}$

8) $\frac{4}{9}-\frac{1}{9}=\frac{4-1}{9}=\frac{3}{9}=\frac{3\div3}{9\div3}=\frac{1}{3}$

9) $\frac{3}{8}-\frac{1}{6}=\frac{3\times6}{8\times6}-\frac{1\times8}{6\times8}=\frac{18}{48}-\frac{8}{48}=\frac{18-8}{48}=\frac{10}{48}=\frac{10\div2}{48\div2}=\frac{5}{24}$

10) $\frac{9}{21}-\frac{2}{7}=\frac{9}{21}-\frac{2\times3}{7\times3}=\frac{9}{21}-\frac{6}{21}=\frac{9-6}{21}=\frac{3}{21}=\frac{3\div3}{21\div3}=\frac{1}{7}$

11) $\frac{3}{4}\div\frac{9}{12}=\frac{3}{4}\times\frac{12}{9}=\frac{36}{36}=1$

12) $\frac{7}{10}\div\frac{21}{20}=\frac{7}{10}\times\frac{20}{21}=\frac{140}{210}=\frac{140\div70}{210\div70}=\frac{2}{3}$

13) $\frac{12}{21}\div\frac{3}{7}=\frac{12\div3}{21\div3}\times\frac{7}{3}=\frac{4}{7}\times\frac{7}{3}=\frac{28}{21}=\frac{28\div7}{21\div7}=\frac{4}{3}$

14) $\frac{12}{5}\times\frac{10}{24}=\frac{120}{120}=1$

15) $\frac{33}{36}\times\frac{3}{4}=\frac{33\div3}{36\div3}\times\frac{3}{4}=\frac{11}{12}\times\frac{3}{4}=\frac{33\div3}{48\div3}=\frac{11}{16}$

16) $\frac{7}{9}\times\frac{1}{3}=\frac{7}{27}$

17) $3\frac{1}{2}+1\frac{3}{4}\rightarrow3+\frac{1}{2}+1+\frac{3}{4}\rightarrow3+1=4,\ \frac{1}{2}+\frac{3}{4}=\frac{1\times2}{2\times2}+\frac{3}{4}=\frac{2}{4}+\frac{3}{4}=\frac{2+3}{4}=\rightarrow$

$\frac{5}{4}=1\frac{1}{4},\ 4+1\frac{1}{4}=5\frac{1}{4}$

18) $4\frac{1}{8}+2\frac{7}{8}\rightarrow4+\frac{1}{8}+2+\frac{7}{8}\rightarrow4+2=6,\ \frac{1}{8}+\frac{7}{8}=\frac{1+7}{8}=\frac{8}{8}=1\rightarrow6+1=7$

19) $4\frac{1}{2}+2\frac{3}{8}\rightarrow4+\frac{1}{2}+2+\frac{3}{8}\rightarrow4+2=6,\ \frac{1}{2}+\frac{3}{8}=\frac{1\times4}{2\times4}+\frac{3}{8}=\frac{4}{8}+\frac{3}{8}=\frac{4+3}{8}=\frac{7}{8}\rightarrow$

$6+\frac{7}{8}=6\frac{7}{8}$

20) $1\frac{2}{21}+4\frac{4}{7}\rightarrow1+\frac{2}{21}+4+\frac{4}{7}\rightarrow1+4=5,\ \frac{2}{21}+\frac{4}{7}=\frac{2}{21}+\frac{4\times3}{7\times3}+=\frac{2}{21}+\frac{12}{21}=\frac{2+12}{21}=\frac{14}{21}=$

$\frac{14\div7}{21\div7}=\frac{2}{3}$

$\rightarrow5+\frac{2}{3}=5\frac{2}{3}$

21) $6\frac{3}{5}+1\frac{2}{3}\rightarrow6+\frac{3}{5}+1+\frac{2}{3}\rightarrow6+1=7,\ \frac{3}{5}+\frac{2}{3}=\frac{3\times3}{5\times3}+\frac{2\times5}{3\times5}=\frac{9}{15}+\frac{10}{15}=\frac{9+10}{15}=\frac{19}{15}=1\frac{4}{15}\rightarrow$

$7+1\frac{4}{15}=8\frac{4}{15}$

22) $2\frac{3}{11}+3\frac{1}{2}\to 2+\frac{3}{11}+3+\frac{1}{2}\to 2+3=5,\ \frac{3}{11}+\frac{1}{2}=\frac{3\times2}{11\times2}+\frac{1\times11}{2\times11}=\frac{6}{22}+\frac{11}{22}=\frac{6+11}{22}=\frac{17}{22}$

$\to 5+\frac{17}{22}=5\frac{17}{22}$

23) $6\frac{2}{3}-4\frac{1}{3}\to 6+\frac{2}{3}-4-\frac{1}{3}\to 6-4=2,\ \frac{2}{3}-\frac{1}{3}=\to\frac{2-1}{3}=\frac{1}{3}\to 2+\frac{1}{3}=2\frac{1}{3}$

24) $5\frac{2}{5}-3\frac{1}{5}\to 5+\frac{2}{5}-3-\frac{1}{5}\to 5-3=2,\frac{2}{5}-\frac{1}{5}=\frac{1}{5}\to 2+\frac{1}{5}=2\frac{1}{5}$

25) $8\frac{1}{2}-3\frac{1}{4}\to 8+\frac{1}{2}-3-\frac{1}{4}\to 8-3=5,\frac{1}{2}-\frac{1}{4}=\frac{1\times2}{2\times2}-\frac{1}{4}=\frac{1}{4}\to 5+\frac{1}{4}=5\frac{1}{4}$

26) $7\frac{2}{3}-2\frac{1}{6}\to 7+\frac{2}{3}-2-\frac{1}{6}\to 7-2=5,\ \frac{2}{3}-\frac{1}{6}=\frac{2\times2}{3\times2}-\frac{1}{6}=\frac{3\div3}{6\div3}=\frac{1}{2}\to 5+\frac{1}{2}=5\frac{1}{2}$

27) $1\frac{2}{3}\times2\frac{3}{4}\to 1\frac{2}{3}=\frac{1\times3+2}{3}=\frac{5}{3},2\frac{3}{4}=\frac{2\times4+3}{4}=\frac{11}{4}\to\frac{5}{3}\times\frac{11}{4}=\frac{5\times11}{3\times4}=\frac{55}{12}=4\frac{7}{12}$

28) $1\frac{1}{6}\times1\frac{3}{5}\to 1\frac{1}{6}=\frac{1\times6+1}{6}=\frac{7}{6},1\frac{3}{5}=\frac{1\times5+3}{5}=\frac{8}{5}\to\frac{7}{6}\times\frac{8}{5}=\frac{7\times8}{6\times5}=\frac{56}{30}=\frac{56\div2}{30\div2}=\frac{28}{15}=1\frac{13}{15}$

29) $4\frac{1}{2}\times1\frac{2}{3}\to 4\frac{1}{2}=\frac{4\times2+1}{2}=\frac{9}{2},1\frac{2}{3}=\frac{1\times3+2}{3}=\frac{5}{3}\to\frac{9}{2}\times\frac{5}{3}=\frac{9\times5}{2\times3}=\frac{45}{6}=\frac{45\div3}{6\div3}=\frac{15}{2}=7\frac{1}{2}$

30) $2\frac{1}{2}\times4\frac{4}{5}\to 2\frac{1}{2}=\frac{2\times2+1}{2}=\frac{5}{2},4\frac{4}{5}=\frac{4\times5+4}{5}=\frac{24}{5}\to\frac{5}{2}\times\frac{24}{5}=\frac{5\times24}{2\times5}=\frac{120}{10}=12$

31) $2\frac{1}{5}\times4\frac{1}{2}\to 2\frac{1}{5}=\frac{2\times5+1}{5}=\frac{11}{5},4\frac{1}{2}=\frac{4\times2+1}{2}=\frac{9}{2}\to\frac{11}{5}\times\frac{9}{2}=\frac{11\times9}{5\times2}=\frac{99}{10}=9\frac{9}{10}$

32) $1\frac{1}{9}\times2\frac{3}{5}\to 1\frac{1}{9}=\frac{1\times9+1}{9}=\frac{10}{9},2\frac{3}{5}=\frac{2\times5+3}{5}=\frac{13}{5}\to\frac{10}{9}\times\frac{13}{5}=\frac{10\times13}{9\times5}=\frac{130}{45}=\frac{130\div5}{45\div5}\to$

$\frac{26}{9}=2\frac{8}{9}$

33) $3\frac{1}{3}\div1\frac{2}{3}\to 3\frac{1}{3}=\frac{3\times3+1}{3}=\frac{10}{3},1\frac{2}{3}=\frac{1\times3+2}{3}=\frac{5}{3}\to\frac{10}{3}\div\frac{5}{3}=\frac{10}{3}\times\frac{3}{5}=\frac{30}{15}=2$

34) $4\frac{2}{3}\div2\frac{1}{2}\to 4\frac{2}{3}=\frac{4\times3+2}{3}=\frac{14}{3},2\frac{1}{2}=\frac{2\times2+1}{2}=\frac{5}{2}\to\frac{14}{3}\div\frac{5}{2}=\frac{14}{3}\times\frac{2}{5}=\frac{28}{15}=1\frac{13}{15}$

35) $6\frac{1}{5}\div2\frac{1}{3}\to 6\frac{1}{5}=\frac{6\times5+1}{5}=\frac{31}{5},2\frac{1}{3}=\frac{2\times3+1}{3}=\frac{7}{3}\to\frac{31}{5}\div\frac{7}{3}=\frac{31}{5}\times\frac{3}{7}=\frac{93}{35}=2\frac{23}{35}$

36) $2\frac{2}{3}\div1\frac{4}{9}\to 2\frac{2}{3}=\frac{2\times3+2}{3}=\frac{8}{3},1\frac{4}{9}=\frac{1\times9+4}{9}=\frac{13}{9}\to\frac{8}{3}\div\frac{13}{9}=\frac{8}{3}\times\frac{9}{13}=\frac{72\div3}{39\div3}=\frac{24}{13}=1\frac{11}{13}$

37) $4\frac{1}{6}\div2\frac{1}{8}\to 4\frac{1}{6}=\frac{4\times6+1}{6}=\frac{25}{6},2\frac{1}{8}=\frac{2\times8+1}{8}=\frac{17}{8}\to\frac{25}{6}\div\frac{17}{8}=\frac{25}{6}\times\frac{8}{17}=\frac{200\div2}{102\div2}\to$

$\frac{100}{51}=1\frac{49}{51}$

38) $3\frac{2}{5} \div 1\frac{5}{4} \rightarrow 3\frac{2}{5} = \frac{3\times5+2}{5} = \frac{17}{5}, 1\frac{5}{4} = \frac{1\times4+5}{4} = \frac{9}{4} \rightarrow \frac{17}{5} \div \frac{9}{4} = \frac{17}{5} \times \frac{4}{9} = \frac{68}{45} = 1\frac{23}{45}$

39) David ate $\frac{1}{3}$ of 6 parts of his pizza$\rightarrow \frac{1}{3} \times 6 = \frac{6\div3}{3\div3} = 2 \rightarrow$It means 2 parts out of 6 parts and left 4 parts. Sara ate $\frac{1}{2}$ of 6 parts of her pizza:
$\rightarrow \frac{1}{2} \times 6 = \frac{6\div2}{2\div2} = 3 \rightarrow$It means 3 parts out of 6 parts and left 3 parts. Therefore, they ate $(2 + 3)$ parts out of $(6 + 6)$ parts of their pizza and left $(4 + 3)$ parts out of $(6 + 6)$ parts of their pizza that equals to: $\frac{7}{12}$

40) Jake run $9\frac{1}{3}$ miles on Saturday and $2 \times \left(9\frac{1}{3}\right)$ miles on Monday and Wednesday. Jake wants to run a total of 50 miles this week. Therefore, $9\frac{1}{3} + 2 \times \left(9\frac{1}{3}\right)$ should be subtracted from 50:
$50 - \left(9\frac{1}{3} + \left(2 \times 9\frac{1}{3}\right)\right) = 50 - \left(\frac{9\times3+1}{3} + \left(2 \times \frac{9\times3+1}{3}\right)\right) = 50 - \left(\frac{28}{3} + \frac{56}{3}\right) = 50 - \left(\frac{28+56}{3}\right) = 50 - \left(\frac{84}{3}\right) = 50 - (28) = 22$ miles.

41) Four times of 21,000 is 84,000. One third of them cancelled their tickets. One third of 84,000 Equals 28,000. $(\frac{1}{3} \times 84{,}000 = 28{,}000)$.
84,000 – 28,000 = 56,000 fans are attending this week.

42) Let x be the total number of balls. Then: $\frac{1}{2}x + \frac{1}{4}x + \frac{1}{8}x + 16 = x$

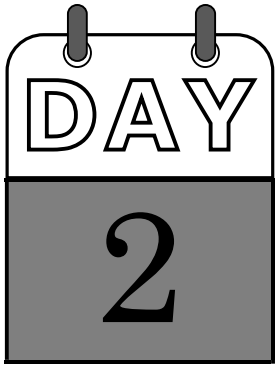

$\left(\frac{1}{2} + \frac{1}{4} + \frac{1}{8}\right)x + 16 = x \rightarrow \left(\frac{1\times4}{2\times4} + \frac{1\times2}{4\times2} + \frac{1}{8}\right)x + 16 = x \rightarrow$

$\left(\frac{4}{8} + \frac{2}{8} + \frac{1}{8}\right)x + 16 = x \rightarrow \left(\frac{7}{8}\right)x + 16 = x \rightarrow 16 = x - \frac{7}{8}x \rightarrow 16 = \frac{1}{8}x$

$\rightarrow$ Multiply both sides by 8: $16 \times 8 = \frac{1}{8}x \times 8 \rightarrow 128 = x$

x is the total number of balls. Therefore, number of white balls is:

$\frac{1}{4}x = \frac{1}{4} \times 128 = 32$

Decimals and Integers

Math topics that you'll learn in this chapter:

1. Comparing Decimals
2. Rounding Decimals
3. Adding and Subtracting Decimals
4. Multiplying and Dividing Decimals
5. Adding and subtracting Integers
6. Multiplying and Dividing Integers
7. Order of Operations
8. Integers and Absolute Value
